Pot Of Gold Is The Communities Token 1000% Community Driven

Pot Of Gold is a decentralized token and Completely Secured (P2E & NFT)

Contract= 0xdb304250105010B2F4053B9e4965065a2Fa9905B

ABOUT US

P.O.G. can't promise anything for now, our results will speak for themselves.

Pot Of Gold has tokenomics in place to make huge gains.

BURNS YOU ASK?

YES WE WILL BE DOING WEEKLY POT OF GOLD TOKEN BURNS

The Pot Of Gold team is great in all aspects. -Super strong, Brave and Courageous.

-We are always working hard. -Our Devs are the best Dev's you can ever have.

-Our mods are the greatest mods any project could have.

-Our admins are all amazing and dedicated.

-Our holders will be the most loyal holders you will ever see.

Let's go to the moon guys Hold and get Gold!

WHITEPAPER

What is Pot Of Gold

Over the past few years, the world of finance has been "hit" by the birth of a new form of conducting financial operations.

In recent years, relatively the only way of getting involved in the finance sector was either directly or indirectly using services provided by

centralized entities, which were the biggest players in the financial markets.

Independent developers, creators, and investors – be it small or big – have come together to create a new possibility for anyone to get involved in.

It was time to open up the financial game for all players; a new template was formed with the name Decentralized finance, also known as DeFi

What is Decentralized Finance?

Financial services are a big part of anyone's life in the modern world. Credit cards, loans, insurances, money transfers,

and a wide range of other services were only in the hands of long-established centralized financial institutions.

Getting into this space, as a new player, offering their services was close to impossible, as well as seeking a different source for these services

as a regular investor or anyone who wants to explore the new world of finance.

On the other hand DeFi enables anyone to enter the financial market by offering a wide range of different providers for any financial service and lowers the regulatory barrier for entry.

Credit scores, personal information, and special requirements have a long history in centralized finance, however, DeFi is here to change this.

Requirements to receive some of the services that the financial market offers are all changed in DeFi through a very simplified but trustworthy way, using the blockchain model with smart contracts.

What is Blockchain?

Let's explain the Blockchain model in short for a better understanding of Smart Contracts.

Blockchain is an immutable online ledger used for transferring data or assets in a way that leaves no

room for exploits or centralization

by any one player or groups,

POG module is under the BSC smart chain and will deliver as promised.

WHAT IS A SMART CONTRACT? LET US EXPLAIN!

WHAT IS A SMART CONTRACT? LET US EXPLAIN!

What is a Smart Contract and why do we use it?

Smart contracts are predetermined contracts of agreement that serve as automatic executors of the pre-agreed terms and agreed way of functioning.

Smart contracts are programs written with codes which secure their functionality once they are deployed and put to serve a certain purpose.

They are usually used to predetermine an outcome so that both or many sides involved can be ensured that the outcomes will always be as they are agreed upon.

Roadmap For Pot Of Gold:

Max Supply =
1,000,000,000,000,000

1 BNB Max buy=
300,000,000,000
